WRITE THE PLAYBOOK

WI  
MADISON HYBRID

DEPLOYED WITH Dawn · West Bend · Navy Federal · Mercedes · Toyota · Micron · PepsiCo · Ace · Kohl's · BNY · JPMorgan · Farmers · NWM · WR · Cargill · Harvard · Smith & Nephew

Carex is hiring the first Forward Deployed Engineer for a Madison fintech: partner with customers, design/build/configure/deploy AI workflows and agents, define the metric before, measure after, found the playbooks. Formal SWE not required. That is Informatica IPS/SEAL plus 24 months of measured agents. Epic Agent Factory preferred — I have not shipped inside Chronicles; I will take it on the floor. [Job map →](#)

01 — YOUR POSTING · MY RECEIPTS

**CUSTOMER + AMBIGUITY**  
Embedded until the unofficial definition is named. 19/20 recovered. Dawn featured because the load moved. No predefined playbook is the job I already wrote.

**BUILD / CONFIGURE / DEPLOY**  
Workflows, integrations, SOAP/REST, CDC, agents, bounded MCP. Configure first. Build when configure is a lie. Hypercare default.

**METRIC BEFORE / AFTER**  
Dawn 8h→1h. Mercedes +200%. West Bend -50%. PepsiCo zero data loss. Lab 1.39→37.47 tok/s. Number first.

02 — HOW I EMBED · FOUNDING FDE MOTION

**01 HEAR THE FLOOR**  
Stand with operators. Load, journal, SKU, night workaround. Not the slide.

**02 WRANGLE WHAT EXISTS**  
AS/400, SOAP, messy CSV, agent skills. Make it operable. Do not wait for a clean ontology.

**03 SHIP + LEAVE A PATH**  
Environment Summary. Six-class test. Named skill-up. If they cannot run it Tuesday, I did not finish.

03 — INDEPENDENT LAB · AUG 2024 — PRESENT · PYTHON · AGENTS

**4070 Tabby Tavern Stack**  
Compose + CUDA: TabbyAPI EXL3, Ollama, Open WebUI, SillyTavern, SearXNG. Forced CUDA offload, VRAM pre-warm, failover. [huggingface.co/jpanasuk/tabby-tavern-stack](#)

**27x Local Grid Suite**  
Discover, bench decode/prefill, GPU routing, SQLite, CLI + PDF. 1.39 → 37.47 tok/s. Warm stream ~76 tok/s. Measure before claiming.

**MCP Dockroot-MCP**  
Agents see Docker/network. Not host-root. Hand the agent the boundary — how you put an agent next to a bank or a clinic without becoming the incident.

**Agents OpenClaw + pipeline**  
Systems → architect → validator on local Ollama: structured output, repair retries. Production WhatsApp agents, 10+ skills. Multi-provider routing with failover.

Also retained through 2025 for Informatica production rescue: Grid/HA, PowerExchange CDC, IDQ, v9/v10, SOAP/REST, SOW/sizing, install-to-go-live. Ivy Funds · Fed Reserve Philly · Farmers Linux SOAP/REST · Giesecke REST/SOAP, VMs, GitHub, Docker.

**THE FIRE DEPARTMENT — FOUNDING FDE STILL DOES SUPPORT**  
Parachuted into 20 troubled accounts. Recovered 19. Milwaukee insurer: three-month outage closed in two days — one buried IBM DB2 driver. Monitor, troubleshoot, improve reliability. That is the job after the demo. [IPS artifacts →](#)

Carex 6273: founding FDE. Customer satisfaction is worthless. Customer loyalty is priceless. That is the clip. That is the job. [Hear the line →](#)

JEREMY PANASUK · 715-970-0204 · JPANASUK@GMAIL.COM · FOUNDING FDE · CAREX 6273

04 — SR. SOFTWARE DEVELOPER, TALEND · MOBE · MINNEAPOLIS

**Live production — mappings, pipelines, on-call, 99.99%** Jul 2023 — Aug 2024  
Talend 8 simple through complex on a live platform. GitLab CI/CD. Redshift + SQL Server. On-call incident command and root-cause writeups the next morning. Messy production, not a sandbox — the FDE motion.

05 — INFORMATICA SPECIALIST · TATA CONSULTANCY SERVICES

**PepsiCo · Ameriprise · Ace — follow-the-sun, virtual XF** Mar 2020 — Dec 2021  
**PepsiCo** Grid/HA + DIH NA/LATAM. Led v9→v10 zero data loss. Teradata → Big Data (~40% analytics lift). Tuning written into go-live timelines. **Ace** PowerCenter → Big Data with business + QA. **Ameriprise** EDG: IDQ, EDC, Axon. 200+ CDEs. 24x7. Data quality as a control.

06 — CONSULTING MANAGER / SEAL · INFORMATICA · JUN 2008 — OCT 2019

Analyst → Program Manager in ten. SEAL. Teams of 7–14. \$4M+ services in two years. v7–v10 upgrade specialist. Consultant of the Year runner-up (2016). Parachute closer: 20 in, 19 recovered. Discovery, decompose, scope, implement, adopt, hypercare. Ladder: Sr. Analyst → Principal → TDM → SDM → Program Manager.

# Customer satisfaction is worthless. Customer loyalty is priceless.

Not a slogan on a careers page. The operating line I stood on in that room — Gitomer’s Teal Book of Trust — and the line I still run on every deploy. Founding FDE is this: the agent still running Tuesday, not a demo they clapped for once.

“Once you realize that satisfaction is the lowest level of acceptable service, you at once understand the power of loyalty.”  
JEFFREY GITOMER · TEAL BOOK OF TRUST · 2008 — THE LINE ON THE WALL. THE CLIP IS THE TALK. THE NEXT TWO PAGES ARE WHAT I ACTUALLY SAID.

## YES — OR HELP TO GET TO YES.

|                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                  |

“Nothing happens until a sale is made.”

RED MOTLEY • 1946

WHAT I SAID IN THE ROOM

Yesterday I had a problem with one of my accounts at Bank of America. I had been with them since 1999 — all of my adult life. To sign up they gave me an MSOET-shirt. Freshman year, that was more than enough to sign just about anything. I called and asked them to take 30-day and 60-day past-due notices off the account because of a lost or stolen card. Which of course was lost or stolen.

I get Ben on the phone. Obligatory hold. Ten minutes later he comes back: he can't click the button, but he can transfer me to Kari. I told him his iSeries profile was probably set up wrong by some goof in IT. He clicked me over fast. On hold for Kari I am already dreaming — car loan, the condo in Wrigleyville, Cubs tickets if the stock hits \$20. If I won the mega-millions I would still stay at Informatica and keep working hard at Dawn. Kari greets me curt. Policy: report the credit accurately. She cannot help.

*The customer could care less about you, your company, or your company policy — and even less about why you can't give them what they want. They want YES, or help to get to yes. If you can't help them, they will go someplace else — and take their money and their word of mouth with them.*

THE DIAMOND RULE OF SERVICE • PATTERSON, 1908

If you wouldn't want it done to you, don't do it to someone else. BofA could have kept me for life with two clicks — home loan, car loan, hundreds of thousands in interest. Because of a "policy," I was gone. Satisfaction is the lowest acceptable service. Loyalty is a process, not a single action. The people who earn it get past success. They get to fulfillment.

DAY BY DAY • DAWN FOODS • JACKSON, MICHIGAN

“You don't earn loyalty in a day. You earn loyalty day-by-day.”

JEFFREY GITOMER

Easy to say. Hard to do. I had been working at Dawn Foods in sparkling Jackson, Michigan. Highest unemployment in the United States at the time — something approaching 10%, and that only counts people “actively looking.” Jackson County was the worst in the state. Some economists put it at 12–14%. Customer loyalty in Jackson may mean the difference between staying in business and the unemployment line. So think about who pays you.

*“The president, CEO, or owner of your company does not pay you. It's your customer that pays you. Your kids eat because customers buy. If your customers don't buy, your kids don't eat.”*

GITOMER • THE SALES BIBLE • 1993

Once you know who pays you, it is obvious: satisfaction is the minimum amount of service we can deliver. I was not in Jackson to be satisfactory. I was there so Dawn would still want Informatica in the building when I was gone — and so the warehouse load that used to take eight hours would take one. That is loyalty you can measure. They put it on [informatica.com](#). They still quote it: “His knowledge not only of the Informatica suite but also at the operating system level has been truly invaluable.” IPS said I was a rock star out at Dawn. That is not a personality. That is day-by-day.

WHY CAREX'S FOUNDING FDE SHOULD CARE

Satisfaction is a demo they clap for once. Loyalty is the agent — human or AI — still using what you launched on Tuesday. Dawn 8h→1h got used. That is a deploy, not an install. Founding FDE never leaves the customer with “the model can't.” Find the path. [Like, believe, trust, confidence →](#)

8h → 1h • used

Warehouse load. Featured on [informatica.com](#) because the number moved. Not a CSAT score they forget. Throughput they still quote. “Rock star out at Dawn” was the sales team leaning on the floor, not a personality.

Two clicks • gone

BofA lost a lifetime over a policy they would not override. Home loan. Car loan. Word of mouth. Founding FDE: if the night operator cannot run the agent, you left them with Kari's policy.

Who pays you

Not the CEO. The customer. Kids eat because customers buy. Madison hybrid 3 days because the customer is in the room. Sand Creek to Madison is the same motion as Jackson.

*“You can make more friends in two months by becoming interested in other people than you can in two years by trying to get other people interested in you.”*

**John’s four daughters • shut up and listen**

The BI lead architect at Dawn, John, has four daughters. Sam in the Navy, in Japan. Amanda in 7th grade, just started track — 100-meter hurdles. Jordan at Georgia Tech. Darby living with her mom because she doesn’t like Dad’s rules. John’s line: “The Marines prepared me for everything except four teenage girls in the house at the same time.”  
I am not wasting your time. This is the hardest thing I do. Shut up and listen. Ask questions. Carnegie said it. Robert Greene said it as Law 4: always say less than necessary. Being liked leads to being a trusted advisor. That is the first part of a buying atmosphere.

**People love to buy. They hate to spend.**

Buying a beer? Love. Buying a car? Love. “How much do I have to spend to get that part replaced?” Hate. Your favorite bar raises the price fifty cents. Does price still matter? All things being equal, people want to do business with their friends. All things not being equal — they still do. Gitomer, Little Black Book of Networking, 2007.  
I knew John’s kids because I asked. That is not a trick. That is the work. A fintech floor will have unofficial definitions of a good workflow and a night operator who invented the workaround in 2011. If you do not listen, you will ship a dashboard. If you listen, they will actually use what you launched.

AND THEY BELIEVE IN YOU

When you are on the client site and they believe in you, they start believing in the platform. You represent the entire enterprise. At Dawn, because of their belief in Informatica, John told Trillium they were not interested. They would go with Informatica’s data-quality solution when the funds were there. How do I know? He told me. Over lunch. Why? Because he trusts me. Why does he trust me? Because we established a friendship. He was telling our competitors he did not even want a proposal. That is not a close. That is a relationship that closed the next product by itself.

AND THEY TRUST YOU • THE LIST WE HELD OURSELVES TO

- 01 Tell the truth.** Once truth is violated, trust evaporates and may never return. At Dawn a lot of things were going wrong — process and people. I did not skirt it.
- 02 Deliver what you promise.** People hope you will. Then they measure you. Gene and I delivered documentation above what was expected.
- 03 Do what you say you will do.** Reliability is the test. On site before they arrived and after they left. Weekly email on milestones.
- 04 Communicate in a timely manner.** Rapid response shows you care. Friendship is not extra. It is the channel.
- 05 Bring value beyond the product.** Dawn had a sincere lack of project management. Velocity plans and WBS for BI were a major value-add.
- 06 Be on time.** Respect for their clock. Proof you are reliable. Give away what you want. If you want trust, trust them. Gitomer.

AND THEY HAVE CONFIDENCE IN YOU

Confidence is built on work you already did. At Dawn we started with the easiest thing: a quick hit to get PowerCenter 8.6 up. When we hit problems installing MDM, they already had confidence we would resolve it. Adding an index over a mapping that did an update increased confidence tremendously. Then you build confidence in the customer’s ability to do it next time without you in the chair.

*If they like you, and they believe in you, and they trust you, and they have confidence in you... then they may buy from you.*

**Like**

John’s daughters. Shut up and listen. A fintech floor will have unofficial definitions and a night operator who invented the workaround in 2011. If you do not ask, you ship a dashboard.

**Believe / trust**

Trillium did not even get a proposal. Tell the truth. Deliver. Show up. Communicate. Value beyond the product. Be on time. Friendship is the channel, not extra.

**Confidence**

Quick win. Hard problem. They watch you stay. Then they can stay. Navy Federal was the same motion years later: scope, install, test, train, wrap, finish ahead.

**Customer satisfaction is worthless. Customer loyalty is priceless.** That was the title in 2008. That is still the job. Founding FDE in Madison: the night operator is the customer. If they cannot run the agent Tuesday, I did not finish. [Job mapped →](#)

07 — REAL-WORLD DOCUMENTATION STANDARDS · IPS ARTIFACTS 2017 FLOOR · HOSTNAMES OFF THIS COPY

The parachute was never a hero hour. It was a written operating path: what is running, what is on fire, what to change, how to prove go-live, who on the customer team can run it after you leave. Same loop the RTX lab uses now. Author: Jeremy Panasuk, Informatica Professional Services.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div><b>Artifact · Environment Summary</b><br/><b>PowerCenter Environment Recommendations.</b> Owner and date on the cover. How mixed internal / consultant / offshore developers actually use the platform. Numbered review of what was measured and changed — not a wish list.<ul style="list-style-type: none"><li>Utilization first: CPU, RAM, disk wait, database wait. Low utilization is a finding. 100% CPU is a finding.</li><li>Config actually applied: ulimit, heap, concurrent jobs, sorter/lookup cache, stale session-log cleanup.</li><li>Incidents closed with GCS: P1 start-delay, bulk-load sorter RAM, dispatch that would not start.</li><li>Grid/HA and TCO: Gold/Platinum SLA, QA twin of production, repository off the shared DB host.</li></ul></div> | <div><b>Artifact · Upgrade Roadmap v3</b><br/><b>Informatica Upgrade Roadmap.</b> Current-state performance review, then the product recommendation: PowerCenter with Grid and HA. Internal domain/gateway/node design. External clustering and the shared filesystem that makes or breaks Session on Grid.<ul style="list-style-type: none"><li>Graphs over a month, not a hallway anecdote. Round-robin vs adaptive. RAM idle while cache spills to disk.</li><li>Filesystem matrix: UNC, DFS, CIFS/NAS, NFS v3, GFS2, Veritas CFS, GPFS. POSIX + I/O fencing or you do not have HA.</li><li>Database HA: Oracle RAC / Data Guard, SQL Server mirroring. Source/target availability separate from the domain.</li><li>Admin of the grid: logging, restarting services, installing components. The customer can operate it.</li></ul></div> |
| <div><b>Artifact · Phase / architecture review</b><br/><b>Phase 2 is not “more of Phase 1.”</b> Name the product features the next workload requires, the topology that will hang, the filesystem that will plateau partitioning, the skill-up the team still needs.<ul style="list-style-type: none"><li>Advanced XML / real-time web-service consumers need Model Repository + Data Integration Service, cores, Developer-tool skill.</li><li>30+ repositories and 30+ integration services is TCP/IP overhead. Upgrades become a migration factory.</li><li>Outstanding deliverables are demos the customer can see: Proactive Monitoring, Advanced XML on their schema.</li><li>Write down that the team is good. Openness is the coaching surface.</li></ul></div>         | <div><b>Deck · PowerCenter 10.0.0 Upgrade Overview</b><br/><b>Jeremy Panasuk / IPS. 28 slides.</b> Why v10, PAM, three upgrade types, six classes of test, Data Validation Option to make same-data honest. This is the coaching deck. The roadmap is the customer-specific evidence. Together they stop “just run the installer.”<ul style="list-style-type: none"><li>In-place — short cycle, no extra schemas, outage for restore. Cannot rename domain or nodes.</li><li>Parallel — snapshot the repo, install fresh, change names, no domain-install outage. Migrate users/groups.</li><li>Clone — snapshot the domain, fastest like-for-like go-live, still an outage for restore.</li><li>DVO: 50% source-to-target, 80% regression, 90% upgrade testing. Audit trail. No extra server.</li></ul></div>                               |

**Founding FDE translation:** Environment Summary = customer process + unofficial definitions + metric. Roadmap = configure vs automate vs build vs simplify. Phase review = next increment, skill-up named. v10 deck = how the room chooses a path and tests it. Same three artifacts before anyone touches Agent Factory, a workflow, or a prototype. [Performance loop→](#)

WHAT EVERY IPS DOCUMENT HAD ON THE COVER — THE FDE KIT

|                                                                                                                                             |                                                                                                                                            |                                                                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <div><b>Owner + date</b><br/>Jeremy Panasuk, IPS. Not an anonymous slide. Someone the customer can call.</div>                              | <div><b>How they actually work</b><br/>Mixed internal / consultant / offshore. Utilization first. Config that is applied, not hoped.</div> | <div><b>Incidents + GCS</b><br/>P1s closed with product support in the write-up. The next person sees what already burned.</div>           |
| <div><b>Recommendation they can run</b><br/>Grid/HA path, QA twin, filesystem, skill-up named. Executable without me in the building.</div> | <div><b>What is still open</b><br/>Outstanding demos, risks, topology that will hang. Phase 2 is not more of Phase 1.</div>                | <div><b>Hostnames stay off public copy</b><br/>xyz teaching templates exist. Named copies are the work. Capacity tables stay inside.</div> |

**Standard:** Owner on the cover. Evidence, not folklore. What was already changed. What is still open. Recommendation the customer can execute without you in the building.

08 – REAL-WORLD PERFORMANCE • LEFT INSIDE THE MBFS ENVIRONMENT SUMMARY • SAME LOOP AS GPU ROUTING

A baseline that is allowed to be slow. A goal. One change between runs. Notes that make the next person dangerous. Thread statistics before folklore. Do not partition until a single partition is understood. The filesystem is often the real Grid/HA product.

|                         |                 |                      |                   |             |
|-------------------------|-----------------|----------------------|-------------------|-------------|
| 1<br>Establish baseline | 2<br>Set a goal | 3<br>Find bottleneck | 4<br>Eliminate it | 5<br>Repeat |
|-------------------------|-----------------|----------------------|-------------------|-------------|

Performance dos

- Cache as much as possible in memory. Spilling lookup / aggregator / sorter / joiner index to disk is the silent 20–30% tax.
- Spread I/O across as many devices as possible. The shared filesystem is a product decision, not a mount.
- Round-robin a single input file until you prove that file is the bottleneck.
- Key-range partition to align the target with database partitioning. Pass-through to add CPU. Then stop.
- Thread statistics first. Transformation ~100% busy → repartition point. Reader/writer ~100% busy → maybe the thread, maybe the system.

Performance don'ts

- Do not add multiple partitions until you have tested and tuned a single partition. Written three times on purpose.
- Do not add partitions or repartition points if the session is already source- or target-constrained.
- Do not add partitions if CPUs are already maxed (%idle under ~5%).
- Do not optimize a sub-two-minute session. Why are you here?
- Do not change three knobs between runs. You will not know what helped.

ISOLATION TESTS WHEN THREAD STATISTICS LIE

Target

Write to a flat file instead of the database. Filter FALSE immediately before the target. Compare to a stand-alone bulk loader. Faster = target-constrained.

Source

Filter FALSE after the Source Qualifier. Read from a flat file instead of the database. FTP the remote file outside PowerCenter. Same speed = source-constrained.

Simple before complex

Analyze table / runstats before optimizer hints. Source-only mapping to take transformation and target out of the experiment.

OS evidence

vmstat and sar. Low %idle = CPU. Non-zero si/so or page-outs = memory. Sustained %wio = disk. Notes: session time, rows/sec, config delta, CPU and disk.

MBFS • MERCEDES-BENZ FINANCIAL • JUN 2017 • THE CHEAT SHEET THAT STAYED

ALFA→ODS at 100% CPU. Cache RAM raised so large transformations stop spilling to disk — 20–30% runtime drop. PWX CDC POC vs bulk load. GFS2 flock gap. Knowledge transfer walked ALFA→ODS, ODS→flat file, ODS→warehouse — not a PDF dump after the fact. Same loop as Local Grid Suite: baseline allowed to be slow, one change, notes the next FDE can run. [Upgrade path →](#)

**Founding FDE translation:** Agent latency, workflow duration, prior-auth cycle time, tok/s — same five steps. Measure before you add another agent. Do not change three prompts between runs.

09 – PICK THE TYPE. THEN TEST LIKE GO-LIVE DEPENDS ON IT. • PC 10 DECK + COACHING

The v10 overview is the coaching deck. The roadmap is the customer-specific evidence. Together they stop an account from “just running the installer.” Founding FDE: stop a fintech from “just turning on the agent.”

| WHEN                                                           | TYPE     | WHY                                                                                                      |
|----------------------------------------------------------------|----------|----------------------------------------------------------------------------------------------------------|
| Very short cycle, many installs already certified in a sandbox | In-place | No extra schemas. Users/groups stay. Outage for domain restore. Cannot change domain or node names.      |
| Longer cycle, tight outage, want new names                     | Parallel | Fresh server + repo snapshot. No domain-install outage. Migrate users/groups. Small settings-drift risk. |
| Pre-prod go-live, minimize settings drift                      | Clone    | Identical domain snapshot. Fast like-for-like. Still an outage. Cannot rename. Extra HTTPS caveats.      |

SIX CLASSES OF TEST

|                                                                                                                           |                                                                                                                                                        |                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>Operability</b><br>Smoke: installer, domain start, repo wizard, services, connectivity, a workflow runs, client login. | <b>Same data</b><br>Full, partial, or automated regression. Longest bar. DVO so you test all rows, not a sample. 50% S→T, 80% regression, 90% upgrade. | <b>Security</b><br>External: injection, SSL, DB grants, open ports. Internal: admin passwords, folder / connection / tool rights. |
| <b>Performance</b><br>Client, integration service, server, network. Equal or better than legacy — with numbers.           | <b>3rd-party</b><br>Schedulers, SVN, deploy frameworks, encryption, file transfer, customer monitors. The item people skip.                            | <b>HA / DR</b><br>HA = single-instance failover, uptime. DR = data-center loss, recovery time and stagnation.                     |

CUSTOMER COACHING • LEAVE THE TEAM DANGEROUS

“Customer satisfaction is worthless; customer loyalty is priceless.” — operating line · Gitomer / Carnegie / Greene. Talk given at Informatica while still on Dawn’s floor.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How coaching showed up in the documents</b> <ul style="list-style-type: none"><li>• <b>Named skill-up.</b> Farmers: Developer tool and Advanced XML for Guidewire. Navy Federal: install, services, naming standards, go-live tests.</li><li>• <b>Walked loads.</b> MBFS knowledge transfer on ALFA→ODS, ODS→flat file, ODS→warehouse — not a PDF dump.</li><li>• <b>One room.</b> When production would not dispatch: entire technology stack plus Informatica GCS in the same room.</li></ul> | <b>The runbook stays</b> <ul style="list-style-type: none"><li>• <b>Praise in the deliverable.</b> Farmers: the team was knowledgeable, open, and could explain why the current architecture existed. That sentence is coaching.</li><li>• <b>Playbook adopted.</b> Mercedes tuning docs kept by TCS. Dawn Type-2 / security / upgrade path locked.</li><li>• <b>QA twin of production</b> so the next incident does not take prod down. Hypercare is default, not a phase you skip.</li></ul> |

11 – AGENTS I ALREADY RUN • EPIC HONESTY • STANDING UP THE FDE FUNCTION • CLOSE  
THE STACK I ALREADY RUN. THE STACK I WILL LEARN ON THE FLOOR.

**4070 Private inference**  
TabbyAPI EXL3, Ollama, Open WebUI, Compose + CUDA. Forced offload, VRAM pre-warm, failover. [huggingface.co/jpanasuk/tabby-tavern-stack](https://huggingface.co/jpanasuk/tabby-tavern-stack)

**MCP Dockroot**  
Agents see Docker/network. Not host-root. Boundary, not the box — how you put an agent next to a bank or a clinic.

**27x Local Grid Suite**  
Discover, bench, GPU routing, SQLite, CLI + PDF. 1.39 → 37.47 tok/s. Same loop as MBFS: measure before claiming.

**OpenClaw Pipeline**  
Systems → architect → validator on local Ollama. Structured output, repair retries. Production WhatsApp agents, 10+ skills. Failover routing.

**EPIC AGENT FACTORY • ART • EMMIE • PENNY – PREFERRED, NOT CLAIMED**  
No-code builder inside Epic EHR, previewed HIMSS 2026, wider 2027. Chronicles remains source of truth; Cogito Cloud; Nebula routes models. I have not shipped an agent inside Chronicles. I have shipped agents with boundaries, customer workflows with unofficial definitions, and go-lives in regulated rooms. The founding FDE learns the customer’s platform on the customer’s floor. I will treat Agent Factory like Grid/HA: embed, measure, write the standard, leave a team that can shape the next one.

YOU ARE HIRING THE FIRST ONE. I WRITE LIKE THE SECOND ONE IS WATCHING.

**Standards**  
Every engagement opens with a metric and an Environment Summary. Every close has a skill-up name and a QA twin. No tribal knowledge.

**Reusable kits**  
Workflow templates, agent skill patterns, integration stubs, six-class tests. Recurring pain becomes the kit, not another hero week.

**Internal tools**  
Automations that make the FDE function cheaper. I already build the tools I wish I had on night one. Then I leave them.

**Product loop**  
Field notes back to engineering weekly. If three customers hit the same wall, it is the next feature.

**Hiring two**  
This PDF is the interview. The next FDE should run pages 6–8 without me in Slack. That is how a function is founded.

**Madison**  
Hybrid 3 days onsite. I live in Sand Creek, WI. I will be in the room those three days. The customer is why.

*"You have sent one of the best that Informatica has to offer in Jeremy."*  
MF GLOBAL • INFRASTRUCTURE

*"I trusted that Jeremy would deliver, with quality... exceeded the expectations at someone of his grade level."*  
PRIME THERAPEUTICS

LOYALTY IS THE PRODUCT AFTER THE PRODUCT

Talk given at Informatica while still embedded at Dawn. Satisfaction is the lowest acceptable service. The customer wants YES, or help to get to yes. BofA lost a lifetime over a policy click. John’s four daughters — shut up and listen. Dawn 8h→1h got used. That is a deploy, not an install. Founding FDE in Madison: the night operator is the customer. If they cannot run the agent Tuesday, I did not finish.

**This posting**  
Carex Consulting Group • Job 6273 • Founding Forward Deployed Engineer  
Madison, WI • hybrid 3 days • Direct hire • fintech startup partner  
[carexconsulting.com/jobs/founding-forward-deployed-engineer-6273/](https://carexconsulting.com/jobs/founding-forward-deployed-engineer-6273/)

If you want the person who founds the FDE function — this is the path. Discovery through deployment, measurement, and ongoing support. Ambiguity is the job. Customer satisfaction is worthless. Customer loyalty is priceless. 715-970-0204 • [jpanasuk@gmail.com](mailto:jpanasuk@gmail.com) • Carex job 6273 • [Back to resume](#)
